Training

The information technology, and the business requirements, are in permanent evolution and it isn't an easy job to keep all your ICT-specialists aware of the latest improvements and techniques. It isn't easy to find the right person with the required competences that will perfectly match your needs.

On the other hand, some of your ICT people should have refreshing courses or should have a reorientation training to be able to use other tools or techniques.

Our **Java Academy** is organized in 2 different sections:

- **Training for beginners**
- **Refresh for experienced**

Java Training

25 days
training
program

Approach

The Java training program is set up, in collaboration with our customers, in the way that after a month of intensive training, the students are capable of assuming the job of a developer or an analyst.

The Java training program is organized in collaboration with the best qualified teachers in Belgium. A competence test is organized after the training period.

Selection

Beginners

The first selection is made by us, based on a match between the client's requirements and the students capabilities. The second selection is based on an interview between the selected student and the client.

Experienced

The client select the employees based on his needs and his own training program.

Stop searching your ICT Partner. You've just found him.
